

◆ TUPLE-BASED QUESTIONS (Using Loops)

1. Write a program to iterate over a tuple and print all elements using a for loop.
 2. Given a tuple of integers, find the **sum of all elements** using a loop.
 3. Write a program to **count even and odd numbers** in a tuple using a loop.
 4. Given a tuple, print all elements at **even index positions** using a loop.
 5. Write a program to **find the maximum and minimum element** in a tuple using a loop.
 6. Given a tuple of strings, count how many strings have **length greater than 3**.
 7. Write a program to **search for an element** in a tuple using a loop.
 8. Given a nested tuple, print all inner elements using **nested loops**.
 9. Write a program to **reverse a tuple** using a loop (without using slicing).
 10. Convert a tuple into a list using a loop.
-

◆ SET-BASED QUESTIONS (Using Loops)

1. Write a program to iterate over a set and print its elements using a loop.
 2. Given a set of numbers, find the **sum of elements** using a loop.
 3. Write a program to **count the total number of elements** in a set using a loop.
 4. Given two sets, find their **common elements** using loops.
 5. Write a program to remove **duplicate elements from a list** by converting it into a set and iterating over it.
 6. Given a set of integers, print all **prime numbers** present in the set using loops.
 7. Write a program to find the **largest element** in a set using a loop.
 8. Iterate through a set and create a new set containing **only even numbers**.
 9. Given two sets, find elements present in the first set but not in the second using loops.
 10. Write a program to count how many elements in a set are **greater than a given number**.
-

◆ DICTIONARY-BASED QUESTIONS (Using Loops)

1. Write a program to iterate through a dictionary and print **keys and values** using a loop.
 2. Given a dictionary of student marks, calculate the **total and average marks** using loops.
 3. Write a program to **count the number of keys** in a dictionary using a loop.
 4. Given a dictionary, print **only the keys** using a loop.
 5. Write a program to print **only the values** of a dictionary using a loop.
 6. Given a dictionary of employees and salaries, find the **employee with the highest salary** using loops.
 7. Write a program to **sum all the values** in a dictionary using a loop.
 8. Given a dictionary, count how many values are **greater than 50** using a loop.
 9. Write a program to **swap keys and values** of a dictionary using loops.
 10. Given a dictionary of words and their frequencies, find the **most frequent word** using loops.
-

◆ MIXED QUESTIONS (Tuple + Set + Dictionary)

1. Convert a tuple into a set using a loop and remove duplicates.
2. Given a list of tuples (key, value), create a dictionary using a loop.
3. Given a dictionary, store all keys in a tuple and values in a set using loops.
4. Count the frequency of elements in a tuple and store the result in a dictionary using loops.
5. Given a dictionary, create a new dictionary containing only items with **even values** using loops.
